What We Offer

We offer a year warranty on all parts and labor installed by us, plus any factory warranty (if you are interested in extended warranty information on your specific equipment please ask). Within that first year, we will give you priority service on any issues with your boiler or furnace. We will take care of submitting the warranty on your boiler or furnace.

What to Expect

Once you've approved your estimate, we will work with you to schedule the best time frame that fits your needs. We collect 50% upon scheduling to lock in your spot and order materials. Any cancellations will be subject to any restocking fees or permits paid. We will pull all necessary permits required by the town or county.

Most installs take 3-5 days (depending on scope of work and equipment installed). During this time you can expect no heat and no hot water (if you are replacing your water heater as well). During the winter months, we will safely place space heaters throughout the home to keep temperatures around 55 degrees to prevent pipes from freezing. If your equipment is located inside your home, we will lay down plastic to protect any carpeted flooring. We will clean up our workspace once we are complete, and have your install inspected by the town or county (depending on your location). In some rare instances, the inspector (or code) will require additional requests that we can not foresee while estimating or installing. In these cases some additional costs may incur.

What We Recommend

For all homeowners who do not primarily occupy their home, we highly recommend you add smart thermostats and an auto water shut off. If you'd like to add these to your home, we can offer you a better price when they are done with the install.
